

## PALET HORIZONTAL DECOILER

MODEL	DHP-1200/2000	DHP-1400/3000	DHP-1600/5000
Maximum load (kg)	2000	3000	5000
Maximum width (mm)	150	150	230
Max. thickness (mm)	1.5	1.5	1,5
Max. height of the load (mm)	700	700	700
Base diameter (mm)	1250	1450	1650
Speed (r.p.m.)	2-10	2-10	2 - 10

Horizontal decoilers are the ideal solution for unwinding coils of light materials with little width and little thickness of strip: they allow a complete unwinding of coils in pallet units with minimal interruptions in production, avoiding downtime.

They are made with a steel structure, welded and stabilized. With a stable base, without fixings and transportable, the machine rests on the ground on four individually height-adjustable support points to ensure correct seating.

Speed control is carried out by means of an electronic speed variator with automatic speed regulation depending on the type of material.

Optional accessories on request: special guides for delicate strips, special protections, increased turning speed, other diameters, etc.
