

FIXED WORKTABLES: A PERFECT SOLUTION FOR SERIAL WORK

Fixed Worktables provide greater comfort and efficiency in laying out parts and tools. These tables allow for the clamping of large or heavy parts, which makes handling easier and ensures stability during the work. In this context, the batteries and machines designed based on the principle of flexibility are essential for performing multiple operations on large pieces. This is particularly useful for serial work, where the part moves from one head to another to complete different processes such as drilling, tapping, or milling, with equipment tailored for each operation.

CUSTOMISED SOLUTIONS TO MAXIMISE PRODUCTIVITY

ERLO GROUP offers solutions tailored to the specific needs of each client, combining tables of different sizes with configurations of up to six heads. These setups are perfect for long series since they allow various operations to be performed on one single machine with high precision and efficiency. Compared to machining centres, these solutions not only stand out for their flexibility and customisation but also for their significantly lower cost. This approach enables companies to increase productivity and optimise resources, positioning them as a cost-effective and efficient alternative in the industrial sector.
